Interactive kiosk

Create an interconnected environment between RoomPad and mobile application

> **Instant booking** of rooms or desks via RoomPad or the mobile app.

> **Booking sync** on all media thanks to the interop with O365 or Google.

> **Booking confirmation** on the interactive room panel.

Sync

witco
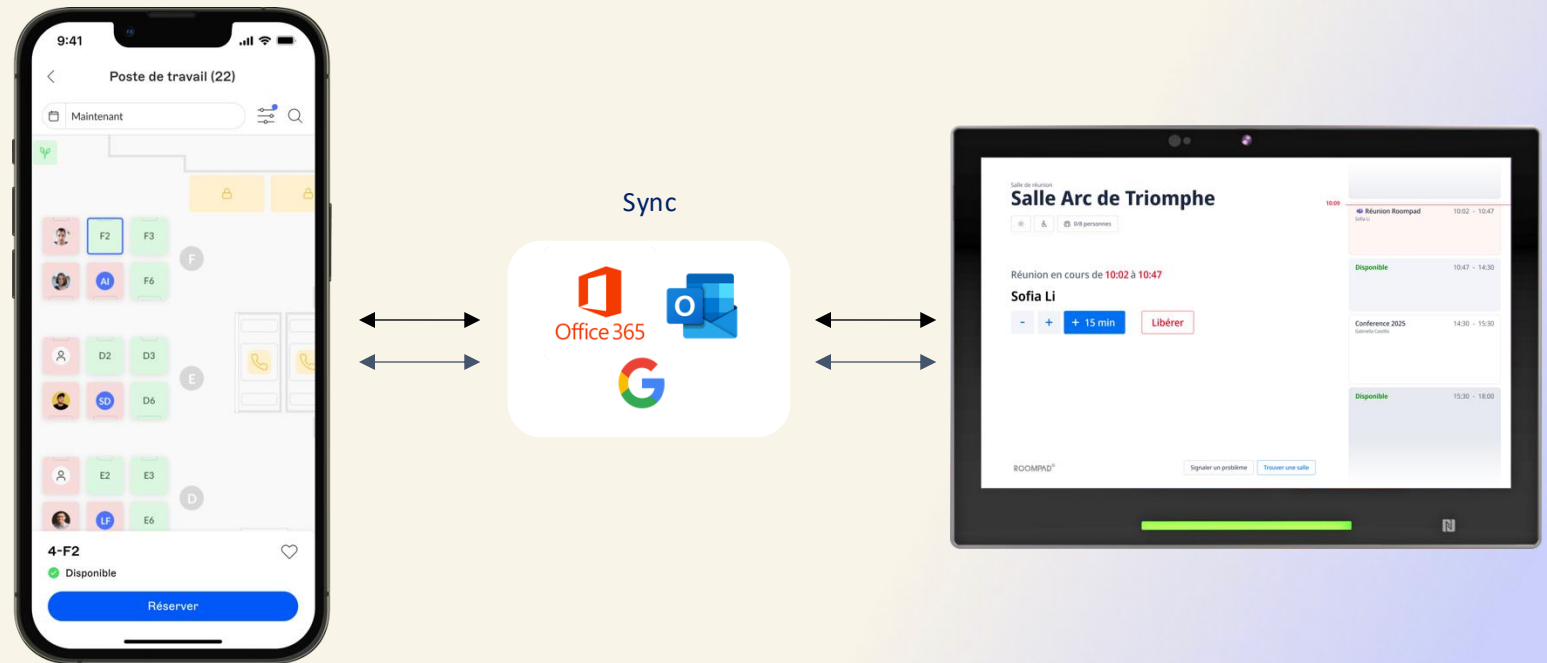

For admins

Provision of statistics to better manage your resources and spaces

Booking statistics

The app helps you anticipate needs and better manage your spaces, with real-time data on the use of resources.

Satisfaction assessment

With the app, you can measure the satisfaction of employees with services through surveys and instant evaluations.

Open API and export

Witco provides APIs to connect your tools to our platform. Data can also be exported for internal use.
Incident requests and responses management

Easy reporting

> Employees can report an incident from the Witco app, a tablet or by scanning the room's QR Code. The form allows you to fill in the details of the incident (subject of the request, location, emergency...) in a few clicks.

> The incident can then be seen in the manager interface of the Witco app, for quick and easy management and prioritization.

Interconnection with CMMS

> For buildings that are equipped with a CMMS, requests can be sent directly to it, which then makes it possible to automate ticket tracking.

> The person who reported the incident can check the ticket status at all times.
